### DETAILED ACTION

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Maurice Pirio on 1/13/2009.

1. (Currently Amended) A method in a computing device with a processor and a memory for requesting a service provider to provide services so that the service provider can demonstrate to a service intermediary that it provided services requested by a service consumer, the method comprising:

- generating by the service consumer a start code and a sequence of codes starting with the start code and ending with an end code, each code being generated by applying a function to the previously generated code, the codes being generated in a forward order from the start code to the end code;

- registering with the service intermediary an indication of an end code of the service consumer and an identification of the service provider wherein the intermediary provides the end code to the service provider;

- when the service consumer requests the service provider to provide services, providing by the service consumer to the service provider the generated codes in reverse order of generation such that the service consumer only provides the next code in reverse order when a prior requested service has been provided by the service provider;

when the service provider can verify that the end code can be derived from the code provided with a request, providing the requested service to the service consumer;

providing by the service consumer to the service intermediary an indication of a consumer last code provided by the service consumer to the service provider;

providing by the service provider to the service intermediary an indication of a provider last code provided by the service consumer to the service provider;

when the service intermediary determines that the consumer last code and the provider last code are the same, indicating that evidence has been provided that the requested service was provided; and

when the service intermediary determines that the consumer last code and the provider last code are not the same,

applying the function to the provider last code to determine whether the end code can be generated;

when the end code can be generated, indicating that the service provider has provided evidence that the requested service was provided and thus establishing that the consumer last code was not the actual last code provided to the service provider or establishing that the provider last code was not the actual last code provided to the service provider by the service consumer; and

when the end code cannot be generated, indicating that the service provider has not provided evidence that the requested service was provided and thus establishing that the provider last code was not a code provided in a request to the service provider by the service consumer such that the service provider verified that the end code can be derived from the provider last code

wherein the method is performed by the computing device.

***Allowable Subject Matter***

Claims 1-3, 8-9, 12, 14-19, 44-46 are allowed.

The prior art either alone in combination do not teach:

generating by the service consumer a start code and a sequence of codes starting with the start code and ending with an end code, each code being generated by applying a function to the previously generated code, the codes being generated in a forward order from the start code to the end code;

registering with the service intermediary an indication of an end code of the service consumer and an identification of the service provider wherein the intermediary provides the end code to the service provider;

when the service consumer requests the service provider to provide services, providing by the service consumer to the service provider the generated codes in reverse order of generation such that the service consumer only provides the next code in reverse order when a prior requested service has been provided by the service provider;

when the service provider can verify that the end code can be derived from the code provided with a request, providing the requested service to the service consumer;

providing by the service consumer to the service intermediary an indication of a consumer last code provided by the service consumer to the service provider;

providing by the service provider to the service intermediary an indication of a provider last code provided by the service consumer to the service intermediary;

when the service intermediary determines that the consumer last code and the provider last code are the same, indicating that evidence has been provided that the requested service was provided; and

when the service intermediary determines that the consumer last code and the provider last code are not the same,  
applying the function to the provider last code to determine whether the end code can be generated;  
when the end code can be generated, indicating that the service provider has provided evidence that the requested service was provided and thus establishing that the consumer last code was not the actual last code provided to the service provider or establishing that the provider last code was not the actual last code provided to the service provider by the service consumer; and  
when the end code cannot be generated, indicating that the service provider has not provided evidence that the requested service was provided and thus establishing that the provider last code was not a code provided in a request to the service provider by the service consumer such that the service provider verified that the end code can be derived from the provider last code

as claimed in independent claim 1 and 44. The dependent claims are allowable for at least the same reasons.
